## **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no description in the specification as originally filed of an "oxidation layer" other than a "sidewall oxide". There is only shown a description of a sidewall oxide formed on the resulting substrate.

Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for forming an "sidewall oxide layer", does not reasonably provide enablement for "forming an oxidation layer". The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

There is no description in the specification as originally filed of an "oxidation layer" other than a "sidewall oxide" as discussed above and therefore insufficient guidance to enable one of ordinary skill in the art to determine suitable process to achieve the instant invention.

Prior art fails to teach forming a gate oxide and a gate electrode on a semiconductor substrate, performing a first ion implantation process for the formation of a (lightly doped drain) LDD region in the substrate, forming spacers on the sidewalls of the gate electrode; performing a second ion implantation process for the formation of a junction region in the substrate using the spacers as a mask, forming a trench for device isolation by removing selectively the top portion of the substrate between the spacers, forming an "oxidation layer" on the whole substrate except on the spacers, forming a diffusion barrier on the resulting substrate, depositing a gap filling insulation layer over the diffusion barrier, planarizing the gap filling insulating layer, and removing selectively some part of the gap filling insulation layer to form contact holes.

## Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quovaunda Jefferson whose telephone number is 571-272-5051. The examiner can normally be reached on Monday through Friday, 8AM to 4:30PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith can be reached on 571-272-1907. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
